

## Lemon AK Auto

Fully Automatic Citric Firepower.

- **Flawless 24% THC!** Perfectly sweet n' sour and extremely potent.
- **Charming and Fast Flowering.** This strain can produce beautiful colored flowers with pink and red hues in 56-63 days.
- **Delicious resin.** The unique terpene profile of skunk, citrus, and sweet pie makes for the most mouth-watering extracts.
- **Easy to grow.** Requires low maintenance and is very resistant to pests, great for beginner growers indoors or outdoors!
- **Perfectly compact.** Grows quite compact and stout, ideal for growers with limited spaces.
- **Fine balanced Sativa hybrid.** Perfect for those looking for a fine-tuned cerebral and corporal effect.

This is Fast Buds take on the classic staple strain AK-47. All improved strong growth patterns. Accompanied by delicious lemon flavors and about 24% THC, users can expect an uplifting fruity-tasting high, great for creative spurs and social events. A sturdy plant that won't grow any higher than 1m, making it ideal for anyone looking to grow a sturdy citrusy retake on an already classic strain; having better growth, stronger effects, and improved tastes.

### Bud description

Zestful flowers. Tightly packed, these buds will be heavily coated in crystals, with a rich deep green color and high THC content, making them a great producer of resin, ideal for those extraction lovers out there!

### Smoke report

A citrusy smoke that delivers uplifting euphoric highs, great for conversing or creative activities. Novices may want to watch out, Lemon AK is potent, boasting up to 24% THC. A strain that's guaranteed to get you high.

### Plant Appearance

Lemon AK can grow anywhere between 70-100 cm, developing a large main cola and a few side branches. She'll be a bushy stem the first few weeks but will resemble a frost-covered Christmas tree by the end of her cycle and may need some support to hold up her sturdy bud production. Despite being an autoflowering strain, her Sativa genetics could lead her to take a little bit longer to fully mature than some of our other genetics.

### Grow Tips

Having a large foliage production in the first few weeks, followed by heavy bud production in the flowering stage - you'll most likely want to place something to help support the plant to avoid it collapsing under its own weight. LST will be welcomed but resides mainly for the more experienced growers. Lemon AK loves as much as she can get, so if you can allow 20 hours of light a day, go for it!

### Taste

With new citrusy touches to the original earthy-tasting classic. A maybe somewhat rough smoke that comes hand in hand with the rich AK-47 taste, combining its bold flavors and adding a new lemony zest to it, taking off some of the roughness and replacing it with a citrus twist.
